

FCPX Titles 4k V1.3 – Major update

~ HOW TO INSTALL THE TEMPLATE ~

This template can be used inside Final Cut X with or without Apple Motion installed.

USE this method if you have Motion installed on your Mac
FCPX Titles folder to:

~/Movies/Motion Templates/Titles

USE this method if you DO NOT have Motion installed on your Mac
Copy FCPX Titles folder to:

/Applications/Final Cut Pro/Contents/PlugIns/
MediaProviders/MotionEffect.fxp/Contents/Resources/Templates/Titles

USE this method if you HAVE BOTH installed on your Mac
Copy FCPX Titles folder to:

/Movies/Motion Templates/Titles

Font used for Titles – Montserrat:

Download: <https://www.fontsquirrel.com/fonts/montserrat>

If you don't have Motion installed watch this tutorial how to create
Motion Template > Titles folder:

<https://youtu.be/A02fRglLtt0>

2) Editing inside Motion 5.3

In this short example we will use Title 05

When you open the Title every title has been organized in to the
Groups.

Expand Title_Group, then expand Title_01 and click on “designed by”
layer.

Go to Inspector > Text > Format and edit the text, fonts, size and
under Appearance tab edit the color, opacity and blur.

Repeat the same step for Title 02 and Title 03.

To adjust title position and scale click on “Title Group” and go to
Properties, the adjust position, rotation, scale and opacity.

Once is done you are ready to export (command + E) the titles.

Make sure your codec is set to “Apple ProRes 4444” and under render
set COLOR to “Color + Alpha” and Render quality set to “Best”.

3) Editing inside Final Cut Pro X

When you open Final Cut Pro X under “Title Browser” tab find “FCPX
Titles 4k”, drag'n drop Title in timeline.

Under “Title” options tab we publish 20–25 parameters for every
title segment.

You can change Color, Font, Opacity, Tracking, Scale, Blur, Offset
etc...

Note:

You can publish additional parameters under Motion 5.3, save and then load titles again inside the Final Cut Pro X.
