

Hello!

Thanks for buying this item.
It's really easy to use:

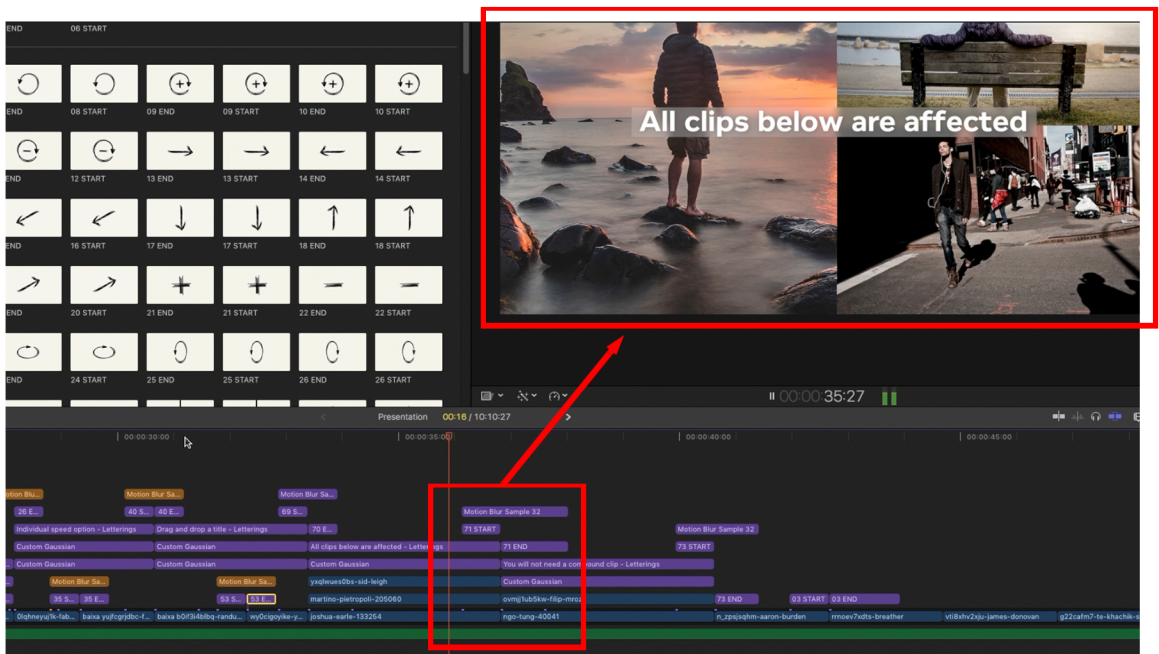

1. There are 99 layer transitions to choose from.

Layer transitions in the left and right directions, rotation, zoom and perspective.
You can combine layers for any title effect you want.

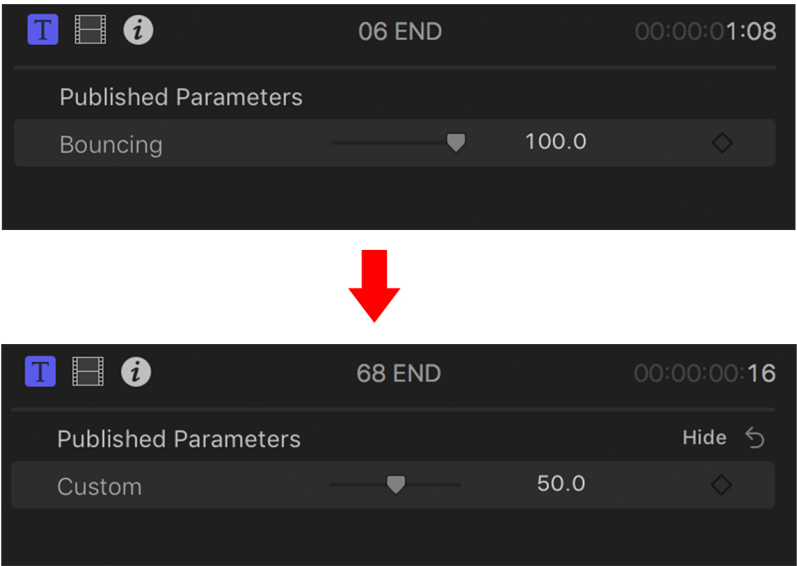

2. Drag a title layer onto your images at any point and move them easily.

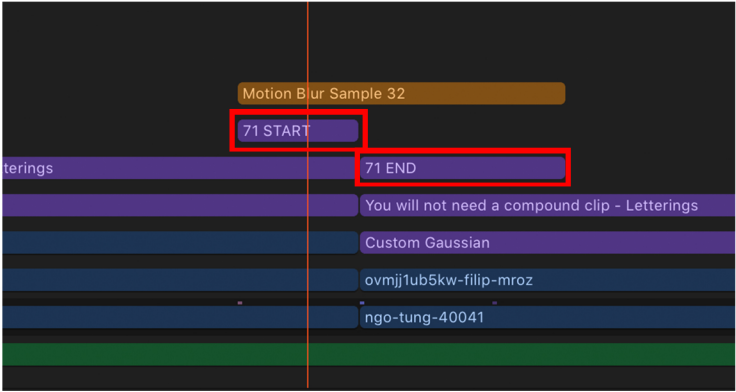

Wherever you put the layers, it will affect all the clips below.
It is not necessary to make a Compound Clip.

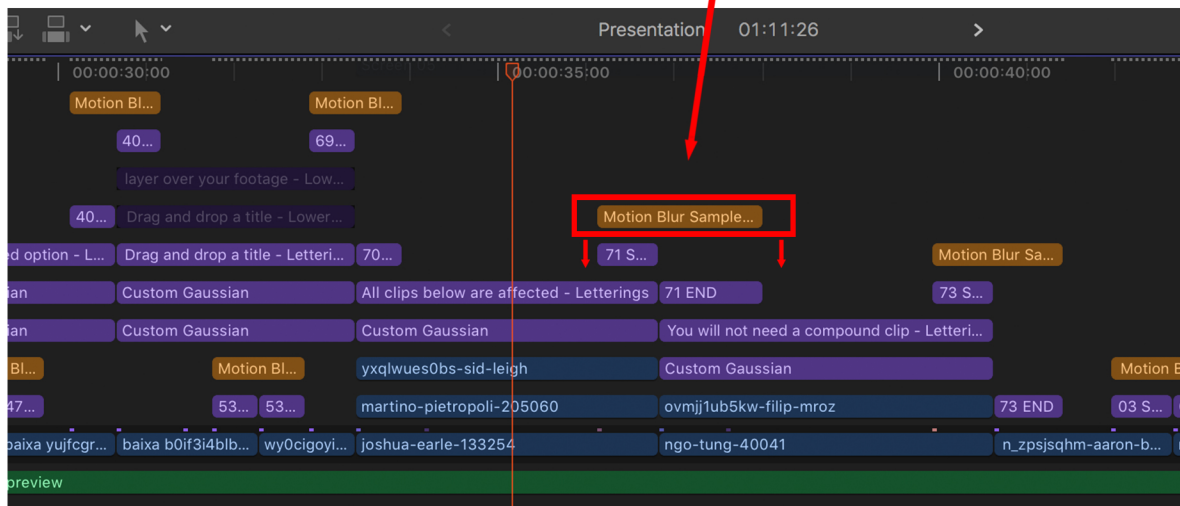

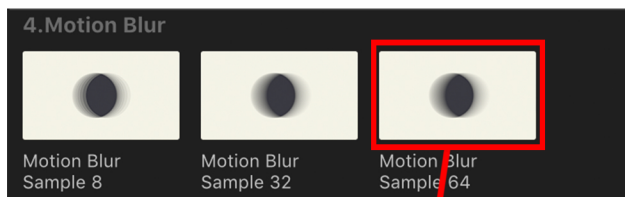

3. Some transitions have changeable parameters.
Adjust the transition bouncing and customizing other transitions.

4. Each beginning and ending title transition corresponds to a number.
The transitions work together dragging a Begin layer transition over a desired clip, then place the same numbered End layer transition right next to the Begin layer.

5. Choose one of three layers of variable intensity motion blur and add the motion blur above your transition! Adjust the duration with the title transition layers.

If you have any questions - please, contact me via my personal page.

Thats all
Hope you like it and again - thanks for buying.

Best regards AleFX!
