

LUTIFY.ME

INSTALLING LUTs

Installing Lutify.me LUTs into ON1 Photo RAW is a simple matter of right-clicking the .ONPreset files from your package and selecting the 'Open with ON1 Photo RAW' option or double-clicking the .ONPreset files from your package.

This will open ON1 Photo RAW software and ask you to confirm the installation.

When asked to confirm, please click YES. Repeat the installation process for all .ONPreset files in your package.

For detailed instructions, please see [this document](#).

APPLYING LUTs

Once installed, Lutify.me LUTs will appear under Effects module in the Presets panel.

Select the appropriate LUT by clicking on the appropriate thumbnail.

The image shows the Lutify-me software interface. On the left, a dark sidebar lists various LUT categories: Architecture, Black & White, Cinematic, Color Film, Color Grading, Develop Workspaces, Faded & Matte, Film, Haze Reducing, Hipster, Landscape, and several Lutify-me specific categories. The 'Lutify-me Teal and Orange LUTs' category is highlighted with a red box. On the right, a preview window titled 'Lutify-me Teal and Orange LUTs' displays a 4x4 grid of thumbnail images, each labeled with a name like 'TO-Macruz', 'TO-Male', 'TO-Mejoris', etc. The thumbnails show a woman in a red dress in different lighting scenarios, demonstrating the color grading effects of the LUTs.
